Subject: progress so far on r2c for OX5034 NOR
Attachments: RESPONSE TO COMMENTS OX5034 (003) 12 18 2019 post cdc.docx

Hi, All. Happy Holidays!!

I thought to send you what I've got so far on the Oxitec OX5034 NOR r2c. It is pretty rough at this point; I look forward to pulling it into shape in 2020. But if for any reason you might want to see what I've got at this time, I am sending the most recent draft along. Just please be aware that there are likely comments that I have not yet inserted. Generally I start with those commenters that have a lot of points to make (e.g., from the Center for Food Safety) and subsequently move to commenters that seem less substantial in the amount of work put into creating the comment. This r2c draft is still at the point of incorporating information from the first group of commenters.

Also, Cassie, I did not have time to organize the comments on antibiotic resistance – given my time constraints I just added those comments as I came across them.

And, Amanda, the section on environmental issues is nothing more at this point than a placeholder – but since you are off to warmer climes for a few days, that should not be a problem.

I return to work on Friday, January 3, but am working flexiplace that day.

See you all in 2020!!! Unbelievable – when I was a child, 2020 was so far into the future I could not imagine it. Now here it is.
